

## Tugas Pertemuan 7

### 1. Home.js

```
import React from "react";
import { Container, Row, Col, Button, Card } from "react-bootstrap";
import { Link } from "react-router-dom";
import heroImage from "../assets/hero-image.jpg";
import mhsPhoto from "../assets/mhs.jpg";

import CustomCard from "../components/CustomCard";

const Home = () => {
  return (
    <div className="container mt-5">
      <Container>
        <Row className="align-items-center">
          <Col md={6}>
            <h1 style={{ color: "white" }}>Welcome to My App!!</h1>
            <br />
            <CustomCard
              title="Yohanes Dimas Pratama"
              textNIM="A11.2021.13254"
              textKampus="Universitas Dian Nuswantoro"
              imageSrc={mhsPhoto}
              style={{ margin: "auto" }}
            />
          </Col>
          <Col md={6} className="mt-4 mt-md-0">
            <Card>
              <Card.Img variant="top" src={heroImage} alt="Hero Image" />
              <Card.Body>
                <Card.Title className="text-center">
                  What is User Management App?
                </Card.Title>
                <br />
                <Card.Text className="text-center mx-5">
                  This application is designed to provide an intuitive and
                  enjoyable experience in user data management. Using React
                  and
                  React Bootstrap technology, this application not only
                  makes it
```

```

        easier for users to add user data, but also provides an
        interactive experience in displaying user information
        efficiently and attractively.
    </Card.Text>
    <br />
    <div className="text-end">
        <Button
            as={Link}
            to="/users"
            variant="info"
            className="float-end"
        >
            Lihat Data Pengguna
        </Button>
    </div>
</Card.Body>
</Card>
</Col>
</Row>
</Container>
</div>
);
};

export default Home;

```

## 2. CustomCard.js

```

import React from "react";
import Card from "react-bootstrap/Card";

function CustomCard({ title, textNIM, textKampus, imageSrc }) {
    return (
        <Card style={{ width: "18rem" }}>
            <Card.Img variant="top" src={imageSrc} />
            <Card.Body>
                <Card.Title className="text-center" style={{ fontSize: "23px" }}>
                    {title}
                </Card.Title>
                <br />
                <Card.Text className="text-center" style={{ fontSize: "16px" }}>
                    {textNIM}
                </Card.Text>
                <Card.Text
                    className="text-center"
                    style={{ fontSize: "16px", marginTop: "-10px" }}
                >
                    {textKampus}
            </Card.Body>
        </Card>
    );
}

```

```

        </Card.Text>
      </Card.Body>
    </Card>
  );
}

export default CustomCard;

```

### 3. Navbar.js

```

import Container from "react-bootstrap/Container";
import Nav from "react-bootstrap/Nav";
import Navbar from "react-bootstrap/Navbar";
import NavDropdown from "react-bootstrap/NavDropdown";
import { Link } from "react-router-dom";

function Navigation() {
  return (
    <Navbar expand="lg" className="bg-body-tertiary">
      <Container>
        <Navbar.Brand as={Link} to="/" className="mx-auto">
          User Management App
        </Navbar.Brand>
        <Navbar.Toggle aria-controls="basic-navbar-nav" />
        <Navbar.Collapse id="basic-navbar-nav">
          <Nav className="mx-auto">
            <Nav.Link as={Link} to="/" className="mx-2">
              Home
            </Nav.Link>
            <Nav.Link as={Link} to="/users" className="mx-2">
              Users
            </Nav.Link>
            <NavDropdown
              title="Another Menu"
              id="basic-nav-dropdown"
              className="mx-2"
            >
              <NavDropdown.Item href="#action/3.1">
                Coming Soon
              </NavDropdown.Item>
              <NavDropdown.Divider />
              <NavDropdown.Item href="#action/3.2">
                Coming Soon
              </NavDropdown.Item>
              <NavDropdown.Divider />
              <NavDropdown.Item href="#action/3.3">
                Coming Soon
              </NavDropdown.Item>
            </NavDropdown>
          </Nav>
        </Navbar.Collapse>
      </Container>
    </Navbar>
  );
}

```

```

        <NavDropdown.Divider />
        <NavDropdown.Item href="#action/3.4">
          Coming Soon
        </NavDropdown.Item>
      </NavDropdown>
    </Nav>
    <Navbar.Text>
      Mata Kuliah: <a href="#login">Pemrograman Sisi Client</a>
    </Navbar.Text>
  </Navbar.Collapse>
</Container>
</Navbar>
);
}

export default Navigation;

```

#### 4. Tampilan hasil menjalankan aplikasi
